It is well known that high-resolution computed tomography (HRCT) is an essential component of the diagnostic pathway in idiopathic pulmonary fibrosis (IPF). Honeycombing, a common feature of IPF seen on HRCT, is crucial for an accurate diagnosis. Unfortunately, identification of honeycombing is not always straightforward, and there is some disagreement regarding its imaging features.

Imaging: how to recognise idiopathic pulmonary fibrosis

Autonomous driving has recently witnessed several setbacks, with at least three major accidents in 2018 to date. But infrared imaging, also known as thermal imaging, holds great promise of decreasing the likelihood of certain kinds of accidents occurring again ...

How Thermal Imaging Can Improve the Safety of Autonomous

Glasses, also known as eyeglasses or spectacles, are devices consisting of glass or hard plastic lenses mounted in a frame that holds them in front of a person's eyes, typically using a bridge over the nose and arms which rest over the ears.. Glasses are typically used for vision correction, such as with reading glasses and glasses used for nearsightedness.

1. Introduction. The variety of radiations and particles offers nowadays numerous possibilities in imaging. The choice of the source depends on many parameters, in particular the nature of the object and its thickness.

[⁶⁴Cu]CuCl₂ accumulates in tumors in a human neuroblastoma xenograft model. Having verified the bio-distribution of [⁶⁴Cu]CuCl₂ in healthy animals, we then focused on understanding how the biodistribution would be impacted in a xenograft tumor model. Therefore, in the next phase of [⁶⁴Cu]CuCl₂ PET imaging experiments, we established a neuroblastoma

xenograft mouse model, by subcutaneous ...

If the lens is biconcave or plano-concave, a collimated beam of light passing through the lens is diverged (spread); the lens is thus called a negative or diverging lens. The beam, after passing through the lens, appears to emanate from a particular point on the axis in front of the lens.
